1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

2. The drawings are objected to because the lines between switches N1, P1, P2, and the control unit 1 are dashed line and should be solid lines since dashed line improperly show alternative connections. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action.

The objection to the drawings will not be held in abeyance.

3. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

4. Claims 1-8 are objected to because in line 14 of claim 1 "said back gate" lacks proper antecedent basis. It is suggested that "said" be changed to -the- as is currently recited in line 12 of claim 9.

Appropriate correction is required.

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 1-11 are rejected under 35 U.S.C. 102(b) as being anticipated by D'Angelo et al (US 5,929,615).

D'Angelo et al discloses a DC/DC converter comprising an input to which an input voltage (V_{in}) is applied, an inductance (36) with a first terminal connected to the input, a first controllable NMOS FET switch (46) connected between the second terminal (38) of the inductance and a grounded reference point, a second controllable PMOS FET switch (34) connected between the second terminal (38) of the inductance and the converter output (V_{out}), a further controllable PMOS FET switch (42) connected between the back gate of the second switch and the converter output (V_{out}), an output storage capacitor (48), and a regulator circuit (44-58) configured to regulate the converter output voltage (V_{out}) to a predetermined value by controlling the first and second controllable switches.

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Ma (US 5,994,882), Criscione et al (US 6,091,232), and Criscione (US 6,310,466) are cited to show DC/DC converters old and known in the art at the time of the invention.
